

DATASHEET

ViloPiglet Protect

A complementary feed supplement for weak new-born piglets, which stimulates the pig's metabolism by promoting the production of natural signalling agents (hormones). Increases the level of insulin-like growth hormone factors (IGF-1) in the pig's blood and helps it to grow faster.

Promotes vitality and energy in small and weak suckling piglets.
Increases the survival rate of suckling piglets and lowers the use of medication prior to weaning.

- Reduces the loss of underweight suckling piglets by 20-50%
- More vital piglets
- Improved suckling reflex

Increased vitality helps the piglet to find the teat. As a result the piglet consumes more colostrum.

Results	Control	ViloPiglet Protect
No. still born	0.7	0.7
No. live born	14.0	13.6
Pre-weaning mortality (%)	11.1%	7.9%

Conclusion

- Dosing with Vilopiglet Protect resulted in a survival rate of weak born piglets to weaning of 29%
- Cost-benefit calculation as part of this study showed a ROI of 1:3.3

Product no.: 19888
